| Front line workers' capacity building | 26 |

Introduction

This resource pack was compiled by UNICEF ECARO to support immunization programme specialists, EPI managers, communication experts to design, implement, monitor and evaluate programmes and activities to improve immunization coverage, reach un- and under-immunized groups, strengthen preparedness for and response to immunization-related outbreak and crises, build and strengthen partnerships through comprehensive and evidence-based advocacy, communication for behavior and social change, social and community mobilization programmes.

The pack is designed to provide quick and easy access to various types of materials: guidelines, toolkits, journal articles etc., helping immunization programme specialists identify the right set of resources to support their immunization efforts. We acknowledge that well-planned, evidence-based and adequately funded strategic communication, as part of national and sub-national immunization programmes can help achieve immunization goals, improve coverage, strengthen trust in vaccines and immunization and increase demand for immunization.

About the resource pack

The resource pack covers five main chapters:

- Strengthening demand promotion for routine immunization;
- New vaccines introduction;
- Crisis, emergency and risk communication;
- Addressing vaccine hesitancy; and
- Front line workers' capacity building.

It contains various materials aiming to strengthen immunization and communication professionals understanding of the specific area of concern, but also to support them design and implement immunization activities. Most of these resources contain step-by-step guidance and offer sample tools to use in conducting situation analysis or research on immunization, developing communication strategies or crisis and outbreak communication plans, designing plans to outreach to vulnerable groups or rolling out supplementary immunization, mobilizing communities or advocating for resource allocations for immunization. The scientific journals articles present reflections on challenges faced by immunization programmes, the latest evidence in terms of what works and what does not, along with lessons learned in different contexts and parts of the world. Several web pages and portals included in this pack offer sample materials, tools and messages.

The Addressing vaccine hesitancy chapter provides resources to help better understand and investigate vaccine hesitancy and its determinants, but also how to address caregivers concerns and fears and reinforce trust in health professionals, health system, vaccines and the immunization process. The chapter on Front line workers' capacity building contain training modules, packages and materials to strengthen health professionals' capacities to proactively engage with caregivers and communities, engage with vaccine deniers, address vaccine hesitancy and promote immunization.

Each resource contains the following information: title, author, year, a short description of what it contains and offers, and the link to the webpage where it can be found and downloaded.

Strengthening demand promotion for routine immunization

This chapter contains resources which help better understand the global and regional immunization priorities, challenges, good practices and lessons learned. They are design to provide support in strengthening routine immunization programmes through better identification of immunization gaps, local needs, opportunities to strengthen and/or expand partnerships and design evidence-based communication programmes and campaigns. The chapter contains easy to follow recommendations how to design and implement robust communication initiatives as part of the national and sub-national routine immunization programmes.

| Let's talk about protection: | The focus of this guide is on behaviour-related communication. Its aim is to |
| Enhancing childhood | identify ways to help healthcare providers encourage all parents to want and get |
| vaccination uptake | their children protected by vaccination as a desired behavioural goal and |
| | outcome, particularly those in population groups whose children are currently |
| ECDC | un- and under-vaccinated. The development of the guide has included both |
| 2016 | primary and secondary research. We contacted people who are making |
| | decisions, studying, writing and advising on protective vaccinations. We |
| | interviewed them, organised focus groups, questionnaires and used other data |
| | gathering methods in an attempt to better understand their decision-making |
| | processes. We explored issues related to access to and understanding of relevant |
| | health information about vaccine-preventable diseases and risks. We sought |
| | clarity on where people obtain information, who they trust and who and what |
| | influences their vaccine-related decisions. |
| | |

New vaccines introduction

This chapter provides specific considerations and guidance on actions to be undertaken to support introduction on new vaccines as part of national immunization schedule. These resources provide examples of tools to consider and case studies of approaches used by countries to introduce new vaccines.

| Title | Description |
|------------------------------|---|
| Field guide to qualitative | Step-by-step instructions to help immunization programmes understand their |

Crisis, Emergency and Risk Communication

These resources will guide development of preparedness plans to increase countries' resilience to immunization related crises and outbreaks. They define and describe risk, crises and emergencies situations and provide strategies, guidance and tools how to manage crises and better engage with various stakeholders.

| Title | Description |
|---------------------------------|---|
| UNICEF communication for | UNICEF commissioned in 2012 a review of its C4D programming in relation to |
| development support to public | DRR, preparedness, communicable disease control, institutional systems |
| health preparedness and | strengthening and community resilience, as well as programming strategies |
| disaster risk reduction in East | currently being shaped to reach the most-at-risk, vulnerable and marginalized |
| Asia and the Pacific: | communities. Structured, thematically focused and informal discussions were |
| A review | conducted around a range of issues linked to DRR, C4D and health systems |
| | challenges and priorities. |

Understanding and Addressing Vaccine Hesitancy

These resources help better define and understand vaccine hesitancy, understand the various determinants of vaccine hesitancy, but also how to measure them and design vaccine safety communication messages. A number of articles reflect about how to address vaccine hesitancy and strategies to engage with hesitant caregivers.

| Title | Description |
|---------------------------------|--|
| Responding to concerns about | Just as anyone else, decision-makers may be influenced by anti-vaccination |
| vaccination | information on the internet and in the media. With this in mind, they may |
| | express concerns about vaccination, questioning its safety or necessity. You need |
| WHO | to respond to this concern in such a way that you do not drive them away, but |
| | win them over. Below are a few tips. |
| | |
| | http://www.euro.who.int/ data/assets/pdf file/0007/276811/Advocacy- |
| | <u>library-Responding_to_concerns_about_vaccination.pdf?ua=1</u> |
| Vaccine safety messages | This document presents key messages concerning vaccine safety and adverse |
| | events following immunization (AEFI). Some supporting facts and |
| WHO | data are also provided. |
| | |
| | http://www.euro.who.int/ data/assets/pdf file/0007/281527/Vaccine-safety- |
| | messages.pdf?ua=1 |
| | http://www.euro.who.int/ data/assets/pdf file/0007/292759/Vaccine-safety- |
| | messages-ru.pdf?ua=1 (Rus) |
| Risk scales - fear the disease, | This documents illustrates the risk of vaccines compared with the risk of diseases |
| not the vaccine | – AND the risk of the treatment used to alleviate the symptoms of diseases. Use |

| Hearts, minds, nudges and shoves: (How) can we mobilise communities for vaccination in a marketised society? | This commentary provides a framework for thinking aboutcommunities and vaccination. The concept of 'herd' or 'community immunity' – and hence the rationale behind mass vaccination – arises from communal interaction. Conceptions of community, therefore, are at the heart of vaccination policy and practice. Advocates of vaccination often employ 'community immunity' as a |
| Attwell K., Smith D. 2018 Journal Article | persuasive message, but this might fail to appeal to the specific target audience they are trying to reach. Different understandings of community, and different values associated with parenting, can determine whether appeals to community are compelling or fall on deaf ears. (Abstract only) |
| Motivational interviewing: A promising tool to address vaccine hesitancy Gagneur A., Gosselin V., Dube E., 2018 | https://www.sciencedirect.com/science/article/pii/S0264410X17310721 Traditional educational methods, on the other hand, have not been shown to be effective in addressing VH. Worst, some studies have shown that trying to convince vaccine hesitant parents to vaccinate their child by giving them more facts can backfire and make them even more hesitant. The need for effective strategies to tackle VH is therefore critical. We suggest that motivational interviewing (MI) is one of the most promising avenues to address the complex issue of VH. Front line workers' capacity building

This chapter contains several resources which will help build front line workers capacities to engage and communicate with caregivers and community, promote immunization, understand and address vaccine hesitancy, address rumours about vaccines and improve demand for immunization.

| Title | Description |
|---|--|
| Interpersonal Communication | Research shows that the quality of the interaction between health workers and |
| For Immunization. Training package | caregivers is a key factor in ensuring completion of the vaccination schedule. Frontline health workers (FLWs) are among the most influential sources of information in vaccine behavior. Health care providers, community health |
| UNICEF Regional Office for Europe and Central Asia 2018 | workers, and community-based volunteers are all part of the frontline workforce and are a crucial bridge between the communities they serve and the health services they provide and support. In this role and position, FLWs practicing good interpersonal communication (IPC) is a key to improving immunization coverage. UNICEF ECARO has developed a training package on interpersonal |
| | communication for immunization. The evidence-based training package contains a facilitator's guide, participant manual and resource materials address front line workers' bias and negative attitudes, builds their capacities to understand, identify and address vaccine hesitancy, including in vulnerable and marginalized groups and strengthens their communication and community engagement skills to increase demand for immunization. |

| Interpersonal Communication For Immunization. Global resources | A global package of tools and resources designed to support FLWs in their immunization work, with a focus on improving their capacity to effectively use IPC to address barriers to immunization uptake and completion was developed by UNICEF HQ. The primary audience for the interpersonal communication for |
| UNICEF | immunization (IPC/I) package is frontline health workers (FLWs) who provide immunization services. https://ipc.unicef.org/ |
| | indepair in permission of |
| Increasing Interpersonal Communication Skills for the Introduction of Inactivated Polio Vaccine (IPV) | This manual has been designed for use in trainings to increase Interpersonal Communication skills (IPC) and knowledge related to IPV for social mobilizers and frontline health workers. |

| Roleplay: Rumours About Vaccines | A 20-minute exercise providing practice tools for responding to rumors about vaccines from the WHO Global Training Network. |
| WHO 2002 | http://www.vaccineresources.org/files/Rumors About Vaccine Role Play.pdf |

| Training manual: Vaccine safety and false contraindications to vaccination WHO 2017 | Health professionals are the single most important influence on whether individuals decide to have themselves or their children vaccinated. Therefore, information and education for health professionals are essential. The aim of this training manual is to present "state-of-the-art", authoritative, scientifically valid advice to counter common misperceptions about vaccination. http://www.euro.who.int/ data/assets/pdf file/0009/351927/WHO-Vaccine-Manual.pdf?ua=1 |

| Vaccine Safety Basics: E- | This online training course aims to establish a shared understanding among |
| Learning Course | professionals whose work is linked to vaccine safety issues. This may include nurses/midwives/community health workers, as well as pharmacists, medical |
| WHO | doctors, and program or technical officers. The course covers a wide range of issues including: background information on vaccine safety issues and types of vaccines, understanding adverse events following immunization and pharmacovigilance, and the critical importance of communication to explain the risks and benefits of vaccines. https://vaccine-safety-training.org/ |
| E-learning course: Influenza | This e-learning course targets people who are responsible for planning, |
| vaccination among health care | designing, monitoring and evaluating seasonal influenza vaccination or other |
| workers - assess and | vaccination campaigns targeting HCWs. |
| communicate to improve | |
| uptake | The first part of this e-learning course explains why influenza is a serious disease |
| | and why prevention of influenza among HCWs is important. The evidence on |
| ECDC | the benefits of influenza vaccination is important for public health decision |
| | making. The second part of the course focuses on how to assess the uptake and |
| | barriers to vaccination and practical help on how to plan a vaccination campaign. |
| | campaign. |
