

# Linked Immunisation Action Network – Theory of Change

## Key assumptions and risks:

- There is sufficient time and bandwidth for country immunisation stakeholders and partner organisations to devote to non-COVID-19 activities.
- There is existing commitment within countries to strengthen routine immunisation programming that the network can leverage and enhance.
- Regional and country Alliance partners recognize the value of the network and provide sufficient engagement and support.
- Former and never-Gavi countries are willing to engage.
- Country immunisation stakeholders have sufficient time and bandwidth for participation in network activities.
- There is buy-in and support for the network from senior government leadership.
- Funding is available at the country level to support adaptation and integration of network solutions.
- Ability of countries, with the support of Gavi and partners, to accurately identify key barriers to sustainable coverage, equity, and NVI.
- Resumption of global travel to facilitate in-person collaborative learning engagements and relationship building.
