The Linked Immunisation Action Network (Linked) brings together immunisation practitioners, policymakers, and partners from middle-income countries (MICs) to identify common immunisation programme challenges and the transformative practices that will lead to greater resilience, equity, and sustainability.

**GAVI MICs LONG-TERM OUTCOMES**

Support sustainable introduction of key missing vaccines in countries that transitioned from Gavi support and countries that never received Gavi support.

**NETWORK INTERMEDIATE OUTCOMES**

Countries adapt and implement workable strategies, good practices, and lessons learned to address barriers to sustainable coverage, equity, and new vaccine introduction.

Network countries are aware of the benefits of the PCV, rotavirus, and HPV vaccines, as well as common barriers.

**NETWORK INITIAL OUTCOMES**

Country-specific barriers to sustainable coverage, equity, and new vaccine introduction identified.

Network countries are aware of the benefits of the PCV, rotavirus, and HPV vaccines, as well as common barriers.

**NETWORK ACTIVITIES**

Routine engagement with priority member countries and local, regional, and global partners.

Learning engagements to share global evidence and technical expertise.

Action-oriented collaborative learning engagements and technical support with curated country experiences.

Development of resources to share country experiences and synthesize network learnings.

Development of qualitative evidence and lessons learned.

Curation and dissemination of network learnings.

Support the network’s regional partners as they facilitate peer-to-peer collaborative learning.

**Risks, Dependencies, and Assumptions**

- Country immunisation stakeholders and partner organizations prioritize the MICs Approach objectives and have the time and bandwidth for these activities.
- There is existing commitment within countries to strengthen routine immunisation programming that the network can leverage and enhance.
- Countries have the ability, with the support of Gavi and partners, to accurately identify key barriers to sustainable coverage, equity, and new vaccine introduction.
- Country immunisation stakeholders have sufficient time and bandwidth for participation in network activities.

- There is buy-in and support for the network from senior government leadership.
- Former and never-Gavi countries are willing to engage without a clear funding commitment from Gavi.
- Resources, including domestic resources, are available at the country level to support the adaptation and integration of workable strategies, good practices, and lessons learned from the network.

- Gavi NVI intelligence and introductions to immunisation programmes in never-Gavi’s support the development of a learning agenda and engagement on this objective.
- Regional and local Alliance partners recognize the value of the network and have the capacity, where relevant and appropriate, to provide technical advisory support, participate in Linked engagements, and support countries to adapt and integrate workable strategies, good practices, and lessons learned from the network.
