Linked Immunisation Action Network – Theory of Change

NETWORK PURPOSE GAVI MICs LONG-TERM OUTCOMES NETWORK INTERMEDIATE OUTCOMES NETWORK INITIAL **OUTCOMES NETWORK ACTIVITIES**

The Linked Immunisation Action Network (Linked) brings together immunisation practitioners, policymakers, and partners from middle-income countries (MICs) to identify common immunisation programme challenges and the transformative practices that will lead to greater resilience, equity, and sustainability

Support sustainable introduction of key missing vaccines in countries that transitioned from Gavi support and countries that never received Gavi support

Prevent and mitigate backsliding in vaccine coverage in countries that transitioned from Gavi support

Countries adapt and implement workable strategies, good practices, and lessons learned to address barriers to sustainable coverage, equity, and NVI Strengthened immunisation programme leadership, technical, and operational capacities, as a result of the knowledge shared throughout the network

Network learnings contribute to Gavi's Learning Agenda

Network countries take increased ownership of the network as a shared space

Strengthened regional partner ecosystems to facilitate collaborative learning

Country-specific barriers to sustainable coverage, equity, & new vaccine introduction identified Network countries are aware of the benefits of the PCV, rotavirus, and HPV vaccines, as well as common barriers Countries identify workable strategies, good practices, and lessons learned through network engagements and resources

Countries and partners recognize the value of peer-to-peer collaborative learning

Strengthened capacity of regional partners to facilitate collaborative learning

engagement with priority member countries and local, regional, and global partners

Routine

Learning
engagements
to share global
evidence and
technical
expertise

Action-oriented
collaborative learning
engagements and
technical support
with curated country
experiences

Development
of resources to
share country
experiences and
synthesize network
learnings

Development
of qualitative
evidence and
lessons learned

Curation and dissemination of network learnings

Support the network's regional partners as they facilitate peer-topeer collaborative learning

Risks, Dependencies, and Assumptions

- Country immunisation stakeholders and partner organizations prioritize
 the MICs Approach objectives and have the time and bandwidth for these
 activities.
- There is existing commitment within countries to strengthen routine immunisation programming that the network can leverage and enhance.
- Countries have the ability, with the support of Gavi and partners, to accurately identify key barriers to sustainable coverage, equity, and NVI.
- Country immunisation stakeholders have sufficient time and bandwidth for participation in network activities.
- There is buy-in and support for the network from senior government leadership.
- Former and never-Gavi countries are willing to engage without a clear funding commitment from Gavi.
- Resources, including domestic resources, are available at the country level to support the adaptation and integration of workable strategies, good practices, and lessons learned from the network.
- Gavi NVI intelligence and introductions to immunisation programmes in never-Gavis support the development of a learning agenda and engagement on this objective.
- Regional and local Alliance partners recognize the value of the network and have the capacity, where relevant and appropriate, to provide technical advisory support, participate in Linked engagements, and support countries to adapt and integrate workable strategies, good practices, and lessons learned from the network.
