

Overview of Immunization Coverage
during COVID -19 period
Sri Lanka

History of the National Immunization Program in Sri Lanka

- The law relating to compulsory vaccination (against smallpox) is referred to in the Vaccination Ordinance of 1886.

1949 – BCG vaccination

**1961 – Introduction of
“Triple” vaccine** [Diphtheria,
Whooping Cough, Tetanus]

**1962 – Oral polio
vaccination**

EPI in 1978

1984- Measles vaccine

1996-Rubella vaccine

After 2000

2001 MR vaccine

2003 Hepatitis B vaccine

2008 Hib containing
Pentavalent vaccine

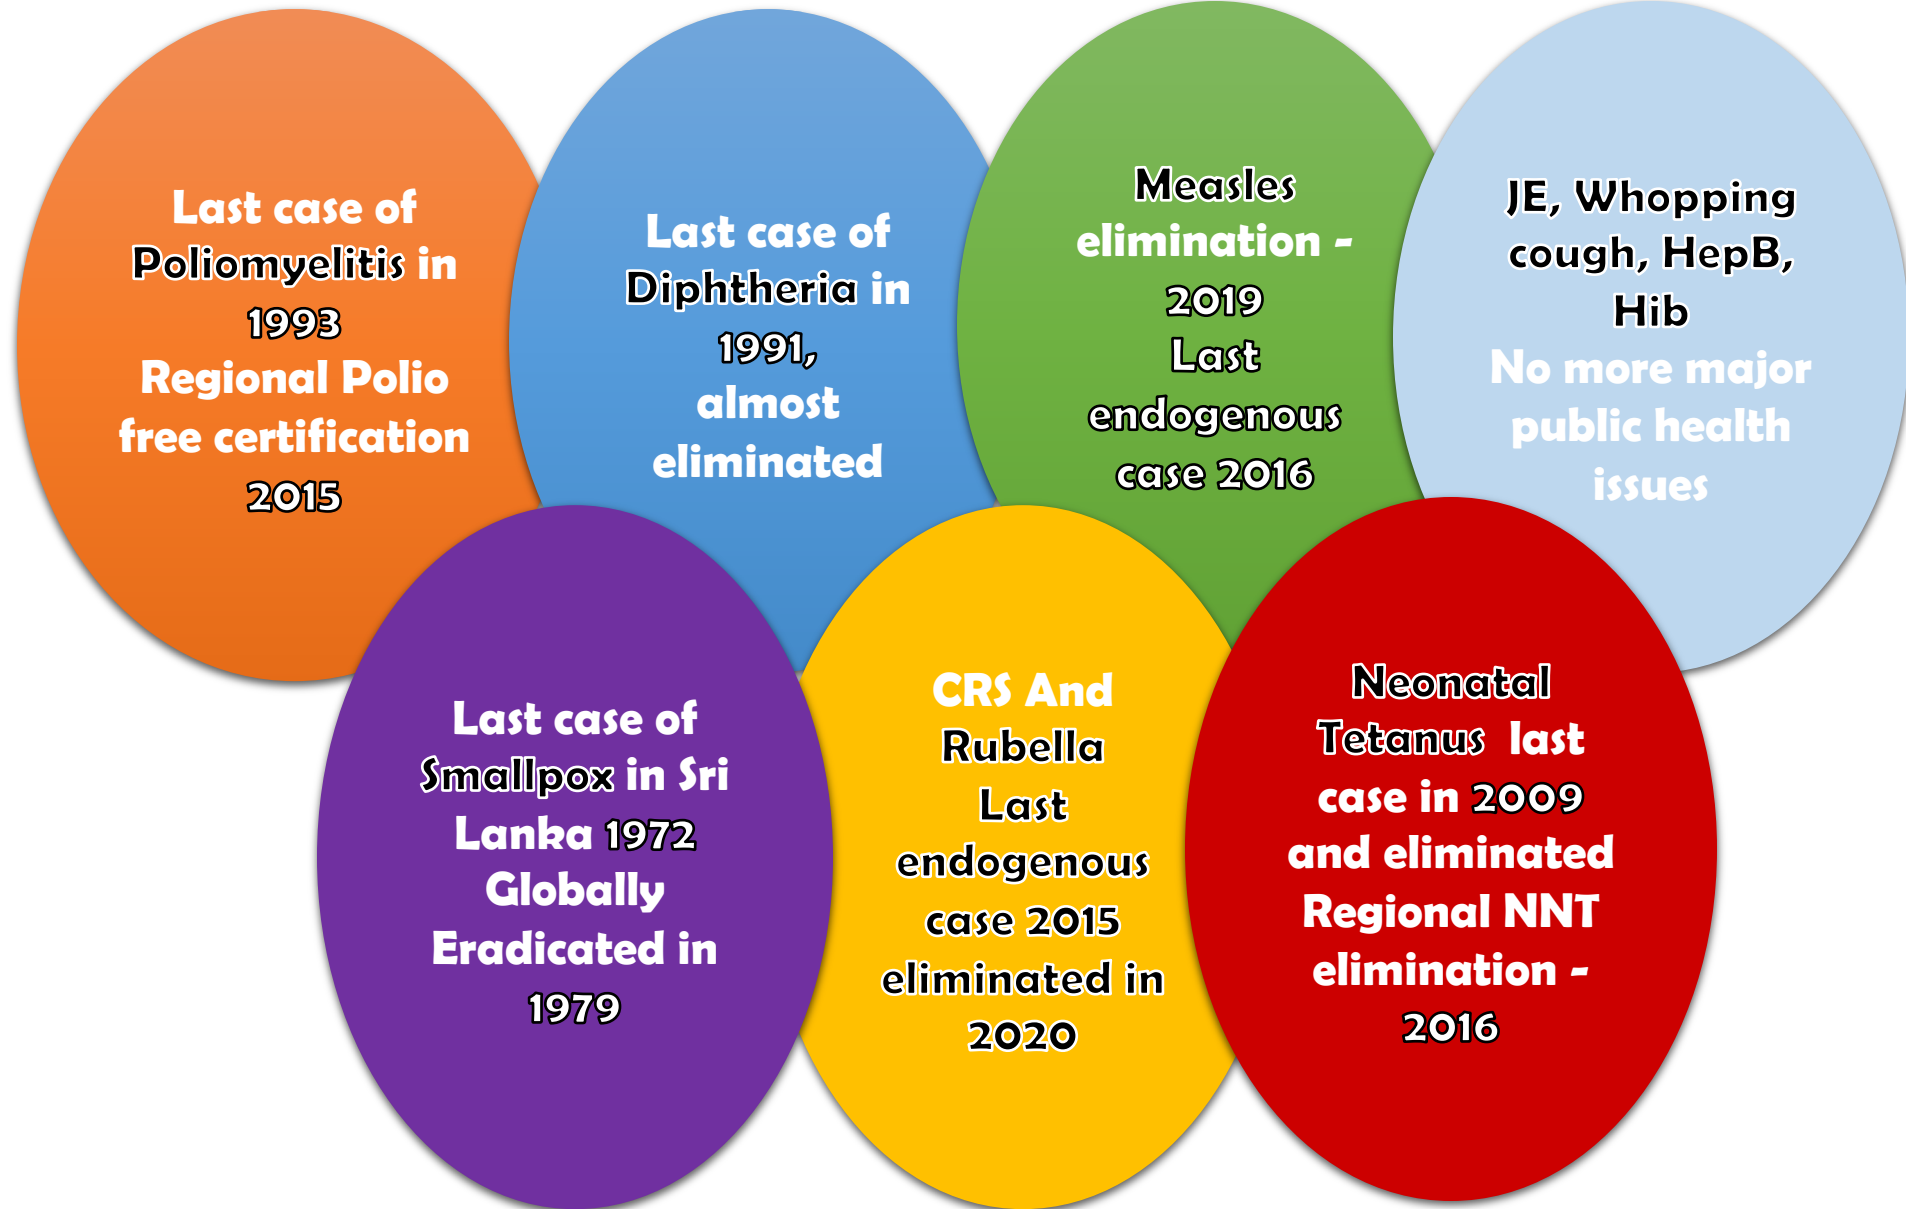

2009 Live JE vaccine

2011 MMR vaccine

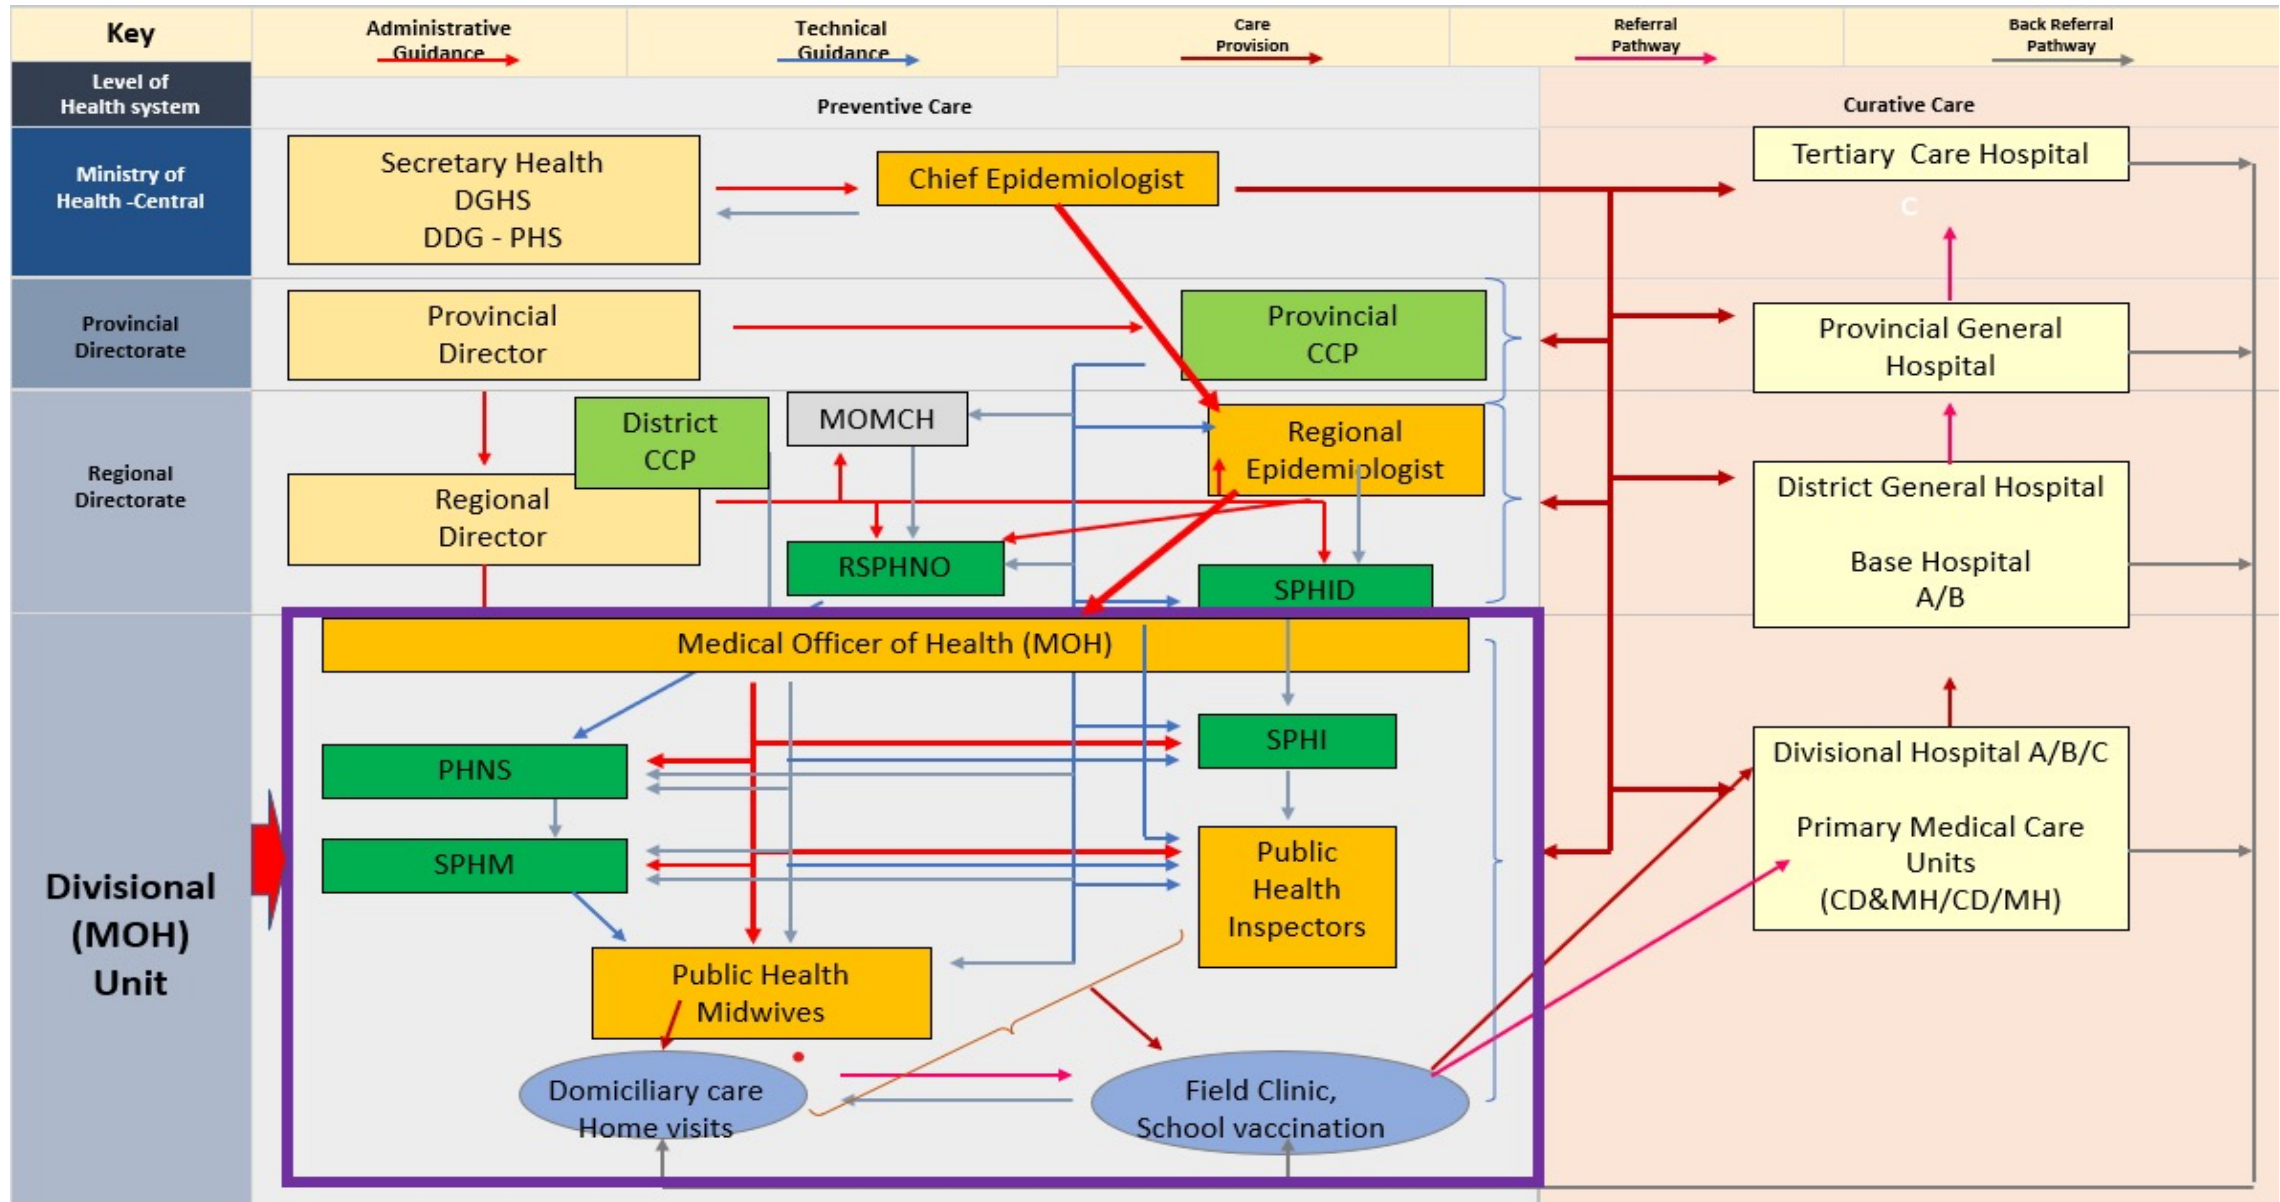

2015 IPV

2017 HPV

Achievements of the National Immunization Programme

Immunization Service Delivery Structure

Key components of PHC delivery system

Integrated PHC services delivered through divisional level (MOH) units

Maternal and Child Health	Immunization	School Health	Well-women services
Family Planning	Environment Health	Occupational Health	Prevention & control of CD
Prevention & control of NCD	Active ageing	Mental Health well being	Health Promotion
Oral health care	Adolescent health		

Opportunities experienced when integrating immunization programmes with PHC system.

- ❖ Can achieve high immunization coverage for relatively less cost and effort
- ❖ Health workers get more opportunities to interact with the communities
- ❖ Health workers can gain more community acceptance and trust
- ❖ Health workers get more opportunities to follow up with clients in the field
- ❖ By employing a multidisciplinary team working together at the field level can improve the efficiency of PHC service delivery.
- ❖ Integrated PHC system gives an opportunity for optimal utilization of available resources at field level
- ❖ Emerging issues related to immunization programmes can be efficiently handled through integrated systems e.g
 - ✓ Vaccine safety issues,
 - ✓ Trace the drop outs
 - ✓ anti vaccine lobby
 - ✓ Community demand for new vaccines

National Immunization schedule

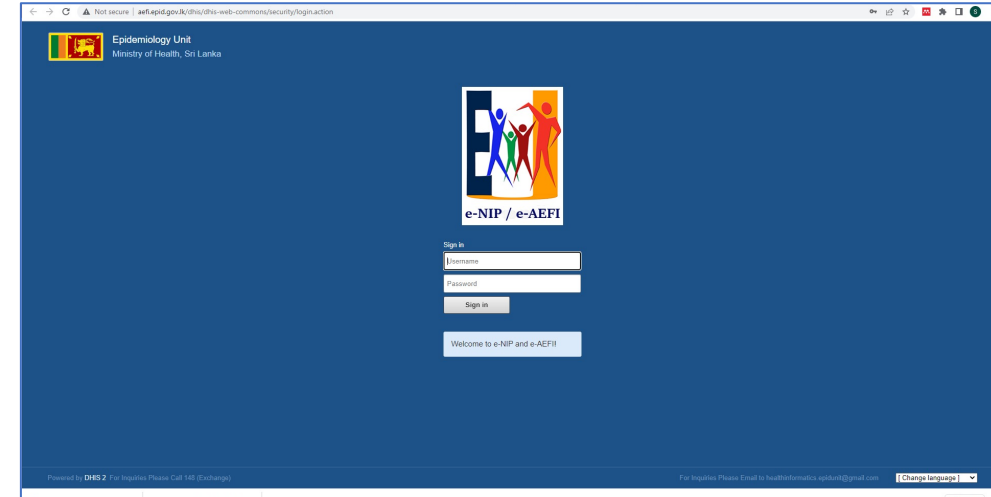

FIRST YEAR OF LIFE	
At Birth	BCG Preferably within 24 hours of birth (before leaving hospital) If a scar is not present 2 nd dose could be offered after 6 months, up to 5 years
On completion of :	
2 Months	OPV & Pentavalent (DTP-HepB-Hib) (1 st dose) fIPV (Fractional IPV) (1 st dose) <small>For a defaulter or for an un-vaccinated child minimum of 6-8 weeks gap between doses is adequate</small>
4 Months	OPV & Pentavalent (DTP-HepB-Hib) (2 nd dose) fIPV (Fractional IPV) (2 nd dose)
6 Months	OPV & Pentavalent (DTP-HepB-Hib) (3 rd dose)
9 Months	MMR (1 st dose)
SECOND YEAR OF LIFE	
On completion of :	
12 Months	Live JE
18 Months	OPV & DTP (4 th dose)
PRE-SCHOOL AGE	
On completion of :	
3 Years	MMR (2 nd dose)
SCHOOL- GOING AGE	
On completion of :	
5 Years	OPV & DT (5 th dose)
10 Years (Grade 6)	HPV (1 st dose) HPV (2 nd dose) 6 months after the 1 st dose
11 Years (Grade 7)	aTd (adult Tetanus diphtheria) (6 th dose)
FEMALES IN THE CHILD-BEARING AGE	
15-44 Years	Rubella containing vaccine (MMR) One dose of MMR vaccine should be given to all females between 15 and 44 years of age, who have not been vaccinated with rubella containing vaccines earlier

PREGNANT WOMEN Tetanus Toxoid	
No documented evidence of previously being vaccinated with Tetanus Toxoid containing vaccine	With documented evidence of previously being vaccinated with Tetanus Toxoid containing vaccine
1 st Dose 1 st Pregnancy, after 12 weeks of POA	One booster dose of Tetanus Toxoid (TT) is indicated during 1 st pregnancy, with a written evidence of previously being vaccinated with 6 doses of Tetanus Toxoid containing vaccination as per National Immunization schedule during childhood and adolescence (3 doses of DTP in infancy + DTP at 18 months + DT at 5 years + aTd at 11 years) and a gap of 10 years or more after the last Tetanus Toxoid containing vaccination
2 nd Dose 1 st Pregnancy, 6-8 weeks after the 1 st Dose	
3 rd Dose 2 nd Pregnancy, after 12 weeks of POA	
4 th Dose 3 rd Pregnancy, after 12 weeks of POA	
5 th Dose 4 th Pregnancy, after 12 weeks of POA	
Tetanus Toxoid is not indicated :	
1. Mothers already received 5 doses of Tetanus Toxoid during previous pregnancies are protected and do not need further Tetanus Toxoid vaccination for the present pregnancy	
2. Mothers already received 6 doses of Tetanus Toxoid containing vaccination according to the National Immunization Schedule and if the gap between the last Tetanus Toxoid containing immunization and the present pregnancy is less than 10 years, are protected and do not need further Tetanus Toxoid vaccination for the present pregnancy	
3. Mothers already received 6 doses of Tetanus Toxoid containing vaccination according to the National Immunization Schedule during childhood and adolescence and have received at least 1 booster dose of Tetanus Toxoid during pregnancy or due to trauma within last 10 years, are protected and do not need further Tetanus Toxoid vaccination for the present pregnancy	

❖ Provide protection against 12 deadly VPDs

Electronic National Immunization Programme data management system (e-NIP)

- The first web-based Management Information System of the National Immunization Programme (NIP), the WEBIIS was introduced in 2016.
- It was upgraded to e-NIP in 2019 and is currently being used to collect and compile NIP data.
- Developed using the DHIS2 platform
- Data entry point - vaccination clinics (the service delivery point of the NIP) based aggregated data entered.
- The data are available for analysis and interpretation at each level.
- Validation points are incorporated into the system to ensure the validity of entered data.
- Allows regular monitoring of the NIP – immunization coverage rate for each vaccine, vaccine wastage rates
- This system immensely helps to monitor the district immunization coverage during the covid time.

Country's immunization performance – WHO & UNICEF , JRF 2021

National Immunization Coverage in Sri Lanka (2012 – 2021)

Key mechanisms to monitor/evaluate immunization performance

- Monitor Divisional/District and National level administrative coverage using e –NIP coverage data – Done during the COVID period
- District-level quarterly public health reviews
- National-level Regional epidemiologist's quarterly reviews – Not able to organize during the COVID period (2020 & 2021)
- Annual district EPI & VPD reviews . Review the divisional level and PHM level individual immunization performance of the previous year using a special tool- Not able to organize during the COVID period (2020 & 2021). For 2021 reviews already started started

District Level EPI & VPD reviews

- ❖ PHI of the respective area needs to maintain one register for all schools in his area
- ❖ All the children enrolled to grade 6 & 7 need to include according to the school registry
- ❖ Due to the prolonged closure of schools in 2020, 2021 not be able to cover school vaccinations.
- ❖ Backlog was almost cleared during the latter part of 2021 and 2022.

Daily Reported COVID 19 patients, Sri Lanka
03/09/2020 - 04/12/2022

Summary of measures taken to sustain the EPI Program activities during COVID-19 Crisis

At national level

- Maintenance of buffer stock of vaccine
 - Central level – 6 months buffer stocks
 - District level – 3 months buffer stocks
 - Divisional level – 2 months buffer stocks
- Assured continuous service provision with precautionary measures whenever possible
- Utilize Hospital immunization clinics to an optimum level
- Timely circular instructions issued by the central level with the latest recommendations considering the COVID situation
- Continuous regular monitoring and supervision EPI coverage data
- Special attention and introduction of immediate measures to maintain EPI coverage where deficiencies are identified.
- Maintained a continuous dialog with the district EPI

At Divisional level

- Continued EPI vaccination clinic services when ever possible
 - EPI vaccination clinics re-scheduled in between lockdown periods
 - whenever time permits accelerated EPI program continued in all districts/divisions
 - Prevented accumulation of children with out due vaccination
- Offered services with precautionary measures
 - Service provision adhering to timely guidelines/circulars

Summary of measures taken to sustain the EPI Program activities during the COVID-19 Crisis

- **Modifications at the service delivery points**
- Extended vaccination clinic hours from 8am to 4 pm with the appointment system
 - Children due vaccination cleared within 3 months
- Continuous service provision through hospital immunization clinics
- Integration of EPI program with COVID-19 vaccination sessions especially during the booster vaccination campaign
 - Improved service accessibility
- Conduct both MCH & immunization clinics at the same center simultaneously with the appointment system
- Accelerated school immunization program
 - Vaccination of school children conducted by local clinics during school closure

Enabling factors for Immunization programme

- ❖ Existence of Well established public health infrastructure
- ❖ Integration of immunization programme into PHC service delivery system
- ❖ Existence of well established inbuilt routine monitoring and evaluation mechanism for EPI programme
- ❖ Availability of free healthcare delivery system
- ❖ High literacy rate
- ❖ Existence of a well-organized school health programme
- ❖ Good partnership between the health and education sectors

Thank you
